

Kristina O'Connell Hill

UX & Product Design Leader

Charleston, SC

804-690-6463

kristinaohill@gmail.com

linkedin.com/in/kristinaoconnellhill

Product and UX design leader with nearly 17 years of experience turning ambiguous problems into clear, user-centered software — with direct experience in regulated pharma content (BP Logix) and chronic-disease, clinical-data patient experiences (ALYKA Health). Currently focused on designing trustworthy AI-driven workflows and human-in-the-loop experiences — including independently designing and shipping *Raisedbed AI*, a live App Store app built end-to-end with Claude Code, now generating revenue from paying users.

EXPERIENCE

BP Logix — Senior Product Manager and UX Evangelist

Mar 2022 - Present

- Lead UX strategy for AI-driven features on PubPro, a publication management platform for pharmaceutical companies, defining interaction models that keep AI agents transparent, trustworthy, and appropriately deferential to human oversight in a regulated, high-stakes content environment.
- Own platform-wide UX enhancements and a research-informed backlog, running prototypes and user testing with pharma stakeholders and subject-matter experts to validate new concepts.
- Serve as Product Owner for PubPro, turning client and stakeholder research — including compliance and scientific accuracy requirements — into an actionable roadmap.
- Own the full product lifecycle from discovery through launch.
- Prototype AI-driven features directly in code using Claude Code to accelerate decision-making and communicate ideas cross-functionally.

BoomTown — Product Owner (CRM) & Senior Product Designer

Sep 2013 - Mar 2022

- Directed feature design and delivery across desktop, iOS, and Android, turning requirements into user stories, prototypes, and acceptance criteria.
- Built and championed accessibility standards across the product; produced prototypes and specs for engineering, QA, and visual design.
- Ran client and internal critique sessions to keep design decisions grounded in real usage and raise the overall quality bar.

ALYKA Health — Senior UX Designer, live on the App Store

Feb 2021 - Jan 2022

- Led a team of UX/UI designers building ALYKA, a chronic disease risk-management app from the ground up — designing flows that integrate EHR data, home health devices, and self-reported input into personalized wellness reports and cardiovascular risk scores.
- Designed core patient-facing experiences hands-on while leading the team, including care team coordination, goal-setting, and screening/medication reminders — balancing clinical complexity with an approachable, consumer-friendly experience.

SPARC — UX Designer

Jul 2012 - Sep 2013

- Guided product direction from the user's perspective; built wireframes, ran user testing, and defined problems ahead of visual design handoff.

Blackbaud — Interaction Designer

Aug 2009 - Jul 2012

- Designed and prototyped mobile interfaces across iOS, Android, and Windows; advocated for accessibility standards company-wide.

Early career: Data & Information Specialist, College of Charleston; Experimental Researcher, U.S. Naval Research Laboratory; Web Usability Intern, Blue Ion, LLC (2005–2009)

INDEPENDENT BUILD

Raisedbed AI — Creator, live on the App Store

Jun 2026 - Present

Designed and built end-to-end using Claude Code — an AI-powered gardening companion that reasons over structured inputs (ZIP code, USDA hardiness zone, frost dates) to generate personalized guidance per user. Now generating revenue from paying users.

EDUCATION

George Mason University — M.A., Human Factors and Applied Cognition

2007 - 2009

Clemson University — B.S., Psychology & Biology

2003 - 2007
